## Foreign Agricultural Trade of the United States

March/April 1985

\*\*\*\*\*

\*  
 \*  
 \* IMPORTANT INFORMATION ABOUT YOUR SUBSCRIPTION \*  
 \*  
 \* Foreign Agricultural Trade of the United States is published six times a \*  
 \* year with two supplements. Subscription prices are \$21 a year domestic \*  
 \* and \$26.25 foreign (prices subject to change). Send check or money order \*  
 \* payable to "Superintendent of Documents" to Superintendent of Documents, \*  
 \* U.S. Government Printing Office, Washington, D.C. 20402. For faster \*  
 \* service, call (202) 783-3238 and charge your subscription to your VISA, \*  
 \* MasterCard, or GPO Deposit Account. \*  
 \*  
 \*  
 \* IS IT TIME TO RENEW? \*  
 \*  
 \* Your subscription to this publication may be due to expire soon. If so, \*  
 \* you will get a renewal notice in the mail from GPO about 90 days ahead of \*  
 \* time. Only one notice is sent. You must return it promptly to ensure \*  
 \* uninterrupted service. If you have misplaced your renewal notice, use the \*  
 \* form on the back of this report. Be sure to attach mailing label. \*  
 \*  
 \*

Prepared by the World Analysis Branch, International Economics Division,  
 Economic Research Service, U.S. Department of Agriculture. Principal  
 coordinators were Edward C. Overton, Thomas A. Warden, and Thomasine B.  
 McCall. Mary L. Fant provided statistical support. Sue Daigrepoint provided  
 word processing and table formatting support. Editorial support was provided  
 by Linda L. Hatcher, Research Information Branch, Economics Management Staff.  
 Data processing support was provided by Sharlan Lindow and William Meiller,  
 International Economic System Branch, Data Services Center, and Penni Korb,  
 World Analysis Branch.

# Digest

## Agricultural Export Values Fall Despite Increased Volume (see p. 2).

U.S. agricultural export values fell 6 percent below year-earlier levels to \$16 billion during the first 5 months of fiscal year (FY) 1985 (October 1984-February 1985). However, a 3.9-million-ton increase in coarse grain exports pushed volume over year-earlier levels. Despite the volume increase, lower prices for most commodities kept total export values down.

Imports Continue To Increase (see p. 65). U.S. agricultural import values totaled \$8.2 billion during the 5-month period, continuing their rise from FY 1984. Imports during February reached \$1.7 billion compared with \$1.6 billion in February 1984. January freeze damage, a resurging U.S. economy, lower exchange rates for most foreign currencies, and production shortfalls for some major commodities contributed to the gain. Volume for some major farm products decreased, especially for sugar, rubber, bananas, tobacco, and coconut oil.

The U.S. Dollar Advances (see p. 105). The U.S. dollar advanced strongly against all major currencies during the first 2 months of calendar year 1985. The dollar's February experience best illustrates its robust performance: record highs were set in 15 out of 19 trading days against the British pound, French franc, Italian lira, and Canadian dollar. U.S. currency reached its highest monthly average against the German mark since December 1971.

1984 U.S. Agricultural Export Contributions by State (see p. 109). Iowa moved ahead of Illinois as the leading agricultural export State in FY 1984, largely due to the 1983 drought, which severely reduced soybean yields in 25 of the 29 producing States. Agricultural export contributions of most States increased during 1984. Other top 10 exporters were California, Nebraska, Texas, Kansas, Minnesota, Indiana, North Dakota, and Ohio.

U.S.-Canadian Agricultural Trade Balance Narrows (see p. 118). Slow growth in U.S. exports to Canada and steady expansion in U.S. imports from Canada continue to narrow the U.S.-Canadian agricultural trade balance. U.S. exports to Canada rose 6 percent in calendar year 1984, but U.S. imports from Canada shot up 23 percent. The U.S. trade surplus was only \$116 million compared with \$850 million just 5 years ago. If present trends continue, the United States could become a net agricultural importer from Canada in 1985.

# Agricultural Export Values Fall Despite Increased Volume

Fiscal year (FY) 1985's U.S. agricultural export value fell 6 percent below year-earlier levels to \$16 billion during the first 5 months (October 1984-February 1985), after rebounding from an especially sluggish first month. However, a 3.9-million-ton increase in coarse grain exports helped volume to exceed year-earlier levels. Despite the volume increase, lower prices for most commodities kept total export value down. Volume rose for corn, sorghum, sunflowerseed, vegetable oils, cotton, beef, and poultry, but fell for wheat, wheat products, soybean meal, and rice.

Falling exports and accelerating imports are expected to push down the agricultural trade surplus for FY 1985 to the lowest level since 1978. Export and import estimates stand at \$34.5 billion and \$19.5 billion, respectively, resulting in an estimated \$15-billion trade surplus, \$4.1 billion lower than that of 1984.

## Coarse Grain Volume Up 12 Percent

Coarse grains have contributed to increased export volume in FY 1985, despite a slow start. Volume through the first 5 months moved 3.9 million tons ahead of the 25.7 million tons shipped a year earlier. Rebounding U.S. production in 1984 increased exportable supplies and lowered prices, thereby reducing 1985 values, despite increased corn and sorghum volume. Most of the increased export volume is attributed to purchases by the Soviet Union, which through February had imported over 6.5 million tons more corn than it did a year earlier. About 40 percent of all U.S. corn exports in the first 5 months went to the Soviet Union compared with 13 percent during the same period in 1984.

Increased foreign production and competition lowered shipments to other major customers during the first 5 months of FY 1985. Of these other customers, only Taiwan imported significantly more corn, about one-third more than a year earlier. Good crops in Mexico, the European Community (EC), and non-EC Western Europe reduced exports by over 2.3 million tons. Declining livestock numbers in Western Europe further reduced its import needs.

Export volume to Japan fell 10 percent below that of a year earlier to 5.5 million tons as Chinese corn and sorghum competed with U.S. corn. However, increased sorghum shipments offset much of this decline. U.S. sorghum exports to Mexico and Western Europe fell dramatically in the 5-month period, but increased exports to Japan, Taiwan, and Sub-Saharan Africa more than compensated for the decline. Chinese competition and Korea's increased use of feed wheat sharply reduced Korean imports of U.S. coarse grain. U.S. coarse grain shipments to Turkey and Iraq continued to grow, while those to South Africa declined with improved crop prospects there.

## Wheat Exports Down Slightly

FY 1985 wheat exports had a strong start in October but subsequently dipped below year-earlier volume due to lagging sales to some major customers. Volume reached 15.2 million tons through February, 3 percent below those of a year earlier, and record-high world production lowered prices, decreasing export value by an even greater amount. Record-high production had a particularly strong impact in China and India, which each imported nearly a million tons less U.S. wheat than during October-February 1984. China has recently turned away from U.S. imports, relying on

competitors to cover its local shortfalls in supplies, while India has halted commercial imports, seeking export markets to cope with its record stocks. A record-high rice crop in Indonesia reduced food import needs there, and combined with high prices for wheat products, resulted in a nearly 400,000-ton drop in its imports of U.S. wheat during the first 5 months.

Brazil, on the other hand, has had a poor crop and imported 1.7 million tons of U.S. wheat, about 500,000 tons more than year-earlier levels. Similarly, a flood-damaged rice crop in Bangladesh led U.S. wheat shipments there to rise about 640,000 tons to nearly 800,000 in the 5-month period. Drought led to substantially higher shipments to Turkey and Algeria, and shipments to Nigeria rose as that country shifted away from more expensive rice. Higher exports to the EC and to the Soviet Union more than offset declining exports to the rest of Western Europe. In Latin America, a drop in exports to Chile and Venezuela matched Brazil's increase, and in Asia, shipments fell slightly to Japan, the Philippines, and Korea.

#### Soybean Exports Sluggish

U.S. soybean production, like corn production, rebounded in FY 1984, and soybean exports were especially low in October 1985. Unlike corn, soybean exports did not fully recover and, for the first 5 months of FY 1985, were only slightly above the 10.1 million tons of a year earlier. Shipments to the Soviet Union and Spain declined the most. In 1984, the Soviets took all 416,000 tons of the U.S. beans they had purchased for the year by February; as of February 1985, however, the Soviets had purchased none. The only other major declines were in shipments to Portugal and Israel. Shipments to Latin America doubled as Mexico and Venezuela rebuilt inventories, and shipments to the EC, Japan, and Taiwan rose.

Increased soybean meal exports to Latin America also reflected the region's rebuilding of its oilseed inventory, but total U.S. soybean meal exports through February fell over a quarter to 2.1 million tons. Higher shipments to Iraq, Canada, Mexico, and Venezuela failed to offset declines to the Netherlands, West Germany, and Italy. The EC's falling livestock numbers; record-high wheat, rapeseed, and barley crops; and the lack of export opportunities to the Soviet Union have constrained EC imports. U.S. exports of other feeds and fodders, primarily corn gluten feed, fell 9 percent, as a nearly 480,000-ton drop in shipments to West Germany overwhelmed a modest increase to the Netherlands.

U.S. sunflowerseed export volume through February nearly doubled from year-earlier levels in marked contrast to oilseed meals and other oilseeds. More than half of the 685,000 tons exported through February were shipped in December, and shipments subsequently fell as supplies declined.

Vegetable oil shipments increased during the first 5 months of FY 1985 except for those of sunflowerseed oil. Soybean oil exports were especially strong to Venezuela, Brazil, and Mexico. Brazil and Mexico imported virtually no U.S. soybean oil during the same period last year.

U.S. cotton exports through February remained ahead of year-earlier levels, reaching 679,000 tons and \$1.1 billion. Shipments to Western Europe were particularly strong, and those to East Asia also rose. Japan, Taiwan, and Korea all imported more U.S. cotton during the first 5 months. The Soviet Union, Thailand, and Bangladesh imported less.

Cattle hide exports continued their growth of the last several years, with volume increasing to most destinations. Volume rose 11 percent during the 5-month period, with exports to Western and Eastern Europe, Japan, China, and Taiwan gaining substantially. Shipments to Korea fell, however.

U.S. rice exports dropped 9 percent during the first 5 months of FY 1985, as a devalued Thai currency further sharpened competition already whetted by record-high world production. Shipments to Latin America dropped dramatically, as did those to Morocco, Nigeria, Republic of South Africa, and Liberia. Prices fell substantially. (Stephen MacDonald, World Analysis Branch)

## Imports Continue To Increase

U.S. agricultural import values totaled \$8.2 billion during the first 5 months of fiscal year (FY) 1985 (October 1984–February 1985), continuing their upward trend from FY 1984. Import volume for some major farm products decreased, especially for sugar, rubber, bananas, tobacco, and coconut oil. Value gains in imports of live swine, meats, fruits, fruit juices, grains, coffee, tea, cocoa products, spices, wine, and malt beverages more than offset value declines. Agricultural imports during February continued ahead of those of 1984, reaching \$1.7 billion compared with \$1.6 billion in February 1984.

Farm products from developing countries, accounting for 57 percent of agricultural imports, grew 8 percent to \$4.7 billion. Brazil remained the single largest source of U.S. agricultural imports, followed by Canada, Mexico, Australia, Colombia, and Indonesia.

### Competitive Values Up

Competitive imports totaled \$5.4 billion during the first 5 months, 8 percent higher than year-earlier levels. Meats, fruits, live swine, grains, wine, and malt beverages accounted for most of the value increases, more than offsetting declines for sugar, live cattle, coconut oil, and tobacco.

Beef imports increased 6 percent to \$493 million because of increased demand, with volume gaining 16 percent to 250,000 tons. Australia maintained its lead among major U.S. sources, followed by New Zealand and Canada. Lower domestic pork output and the weak Canadian dollar raised pork imports 39 percent to \$341 million. Canned pork, mainly from Denmark, as well as fresh pork from Canada, gained sharply in volume.

Cheese imports, at \$168 million, declined 4 percent during the first 5 months from the year-earlier value, while volume, at 62,000 tons, gained slightly. Western Europe was the leading cheese supplier, providing 76 percent of the volume.

U.S. sugar imports dropped 21 percent in volume to 1.1 million tons in the first 5 months of FY 1985, while value declined 20 percent to \$439 million. The reduced sugar imports reflected a shift in use to high-fructose corn syrup. The sugar quota for 1985 has been set at 2.3 million tons (raw value), down sharply from 2.8 million tons in 1984. U.S. sugar consumption in FY 1985 is expected to decline to 7.5 million tons compared with 7.8 million in FY 1984. Principal sugar suppliers were the Dominican Republic, Australia, Argentina, the Philippines, and Brazil.

Larger fruit juice imports pushed total fruit and preparation imports up 82 percent during the first 5 months of FY 1985 to \$706 million. Fruit juice import volume skyrocketed 57 percent above year-earlier levels to 16.3 million hectoliters, a result of January's weather-damaged crops in Florida. Higher prices boosted values 113 percent to \$480 million. Orange juice from Brazil and apple juice from Argentina accounted for most of the growth. Also, fresh grapes from Chile and canned pineapples from the Philippines and Thailand contributed to higher fruit imports.

Oilseed and product values declined 2 percent to \$347 million, due mainly to lower volume. Coconut oil, accounting for 45 percent of U.S. vegetable oil imports,

decreased 8 percent in value to \$136 million; volume dropped 31 percent to 149,000 tons. The Philippines supplied the bulk of the coconut oil.

Dutiable cattle entries in the first 5 months of FY 1985 fell sharply to 243,000 head (\$105 million) from 440,000 head (\$144 million) during the same period in 1984. Canada shipped 137,000 head to U.S. markets during the 5-month period compared with 117,000 head during the same months in 1984. Mexico shipped 106,000 head, down sharply from 323,000 head. In contrast, swine entries from Canada rose sharply to 697,000 head, against 274,000 head during the first 5 months of FY 1984. Shortfalls in U.S. pork output and lower prices contributed to increased hog shipments to U.S. processing plants.

#### Noncompetitive Imports Up

Noncompetitive import values, accounting for 34 percent of U.S. agricultural imports, gained 8 percent from the first 5 months of FY 1984 to \$2.8 billion. Coffee import values totaled \$1.3 billion, nearly unchanged from those of a year earlier. Volume increased less than 1 percent to 451,000 tons, as unit import prices increased from \$1.29 per pound in the first 5 months in 1984 to \$1.32 per pound in FY 1985. Brazil, Colombia, and Mexico were the major suppliers.

Cocoa beans and products, ranking second among noncompetitive imports, rose 70 percent in value during the first 5 months to \$580 million and 59 percent in volume over year-earlier levels. Imports into the United States were heavy early in the year due to lower U.S. inventories, higher world cocoa bean production, and lower prices. Increased domestic consumption of cocoa products pushed imports of cocoa butter, powder, and chocolate above year-earlier levels. The New York cocoa futures price averaged \$1 per pound in October 1984, but increased supplies from record crops in the Ivory Coast, Brazil, Ghana, Nigeria, Malaysia, and Cameroon pulled prices back to 98 cents per pound in February 1985. The Ivory Coast, Brazil, and Ecuador supplied most of the U.S. cocoa and product imports.

Values for crude rubber and allied gums totaled \$306 million, down 15 percent from the first 5 months of FY 1984. Volume declined 3 percent to 337,000 tons. Unit import prices for rubber also declined 13 percent below year-earlier levels. Imports will probably remain below year-earlier levels because of larger stocks. Indonesia and Malaysia shipped most of the U.S. rubber imports.

#### Agricultural Trade Balance To Decline

FY 1985's U.S. agricultural imports may slightly exceed last year's \$18.9 billion, as higher prices offset declining volume. The agricultural trade surplus is estimated at \$15 billion in FY 1985, a \$4.1-billion decrease from last year. The expected increase in agricultural imports is mainly the result of shortfalls in domestic production of fruits, vegetables, beef, and pork; appreciation of the dollar; higher prices; and strong economic growth.

Fruit and vegetable imports are forecast to continue strong this year because of January's weather-damaged crops in Florida. Concentrated orange juice imports will continue their upward trend in 1985. Meat imports are forecast to increase to \$2.3 billion compared with \$1.9 billion last year.

Sugar imports are expected to decline 18 percent in FY 1985, but demand for high-fructose corn syrup is expected to continue upward. Substantial increases in U.S. domestic soybean supplies may replace some coconut oil imports in FY 1985. (Charles E. Goode, World Analysis Branch)

# The U.S. Dollar Advances

The U.S. dollar advanced strongly against all major currencies during the first 2 months of calendar year 1985. The dollar's February experience best illustrates its robust performance: record highs were set in 15 out of 19 trading days against the British pound, French franc, Italian lira, and Canadian dollar. U.S. currency reached its highest monthly average against the German mark since December 1971.

Only the Japanese yen has shown any resistance to the dollar's surge, despite a small loss over the course of February. The burgeoning U.S. economy, declining (or stable) world commodity prices, and expanding world trade have helped strengthen the dollar.

## U.S. Economy Boosts Dollar

The most important factor underscoring the dollar's current position is the impressive performance of the U.S. economy. Rising rates of return on dollar-denominated financial assets have accompanied rapid growth. Demand for U.S. Government securities and other instruments has been brisk. Virtually anyone may participate in the most open and varied capital market in the world, sharing in the profitability currently accorded U.S. investment opportunities. Increasing desires to purchase U.S. stocks and bonds drive up the dollar's international valuation.

A second, and perhaps more important, element in the area of such international capital flows is the apparent decision of U.S. investors to keep their money at home. The U.S. financial market is at least as appealing to U.S. citizens as it is to foreigners, especially when viewed in contrast to sluggish economic growth in Western Europe, limited opportunities in Japan, and the international debt crisis. Therefore, upward pressure is put on the dollar's value from two fronts: the continuing increase in the demand for dollars from abroad and the continuing reduction in the supply "sent" overseas.

## Intervention Fails To Send Dollar Lower

The dollar's value rose sharply in January and February despite concerted and massive central bank intervention by European countries, Japan, and Canada. West Germany alone is estimated to have spent almost \$5 billion in February in an effort to stave off the mark's demise. Three primary reasons probably undermine any long-lasting effect on the dollar's value. First, in an environment with strong fundamental support for the dollar, it is unlikely that intermittent central bank activity can affect the dollar's value. Second, foreign exchange market activities complicate other objectives of monetary authorities, such as controlling domestic money supplies. The Federal Reserve, for example, would be reluctant to risk renewed inflation in order to maintain a fixed value for the dollar. Third, the volume of daily foreign exchange activities, estimated at \$50 billion per day in New York alone, limits the ability of even the wealthiest central bank to systematically enter and affect currency markets.

## Increased Trade, Falling Commodity Prices Lift Dollar

The U.S. dollar is now, as much as any time in the past, the world's currency. Most world trade (estimates range between 60-70 percent) is denominated in U.S. currency. U.S. dollars also serve as the intermediary for cross-currency

transactions where markets are small, as well as in many where the markets are large. As world trade expands, then, demand for dollars rises.

International commodity prices are almost always quoted in dollars. The rising value of the dollar has been, and continues to be, closely associated with falling world prices for metals and other primary commodities. As a result, the dollar retains its purchasing power on world markets, where prices may fall, better than in domestic markets, where general prices are still rising. This feature of the international dollar is an important reason that its value has remained.

(David Stallings, World Analysis Branch)

# 1984 U.S. Agricultural Export Contributions by State

Iowa moved ahead of Illinois as the leading agricultural export State in fiscal year (FY) 1984 (October 1983–September 1984). Agricultural export contributions of most States increased during 1984. Other top-10 exporters were California, Nebraska, Texas, Kansas, Minnesota, Indiana, North Dakota, and Ohio. U.S. agricultural exports during FY 1984 totaled \$38 billion compared with \$34.8 billion the previous year. Values increased for wheat, rice, coarse grains, cotton, fruits and vegetables, hides, tallow, and dairy products.

## Top 10 Contributors

Imputed export shares for Iowa in FY 1984 totaled \$3.44 billion, followed closely by Illinois with \$3.28 billion (table 12). The 1983 drought severely reduced soybean yields in 25 of the 29 producing States. Illinois' soybean production in 1983 dropped 25 percent from year-earlier levels, and Iowa's fell 9 percent. For both States, soybeans are the second largest export crop behind corn.

Other States among 1984's top 10 exporters were California (\$2.65 billion), Nebraska (\$2.18 billion), Texas (\$2.16 billion), Kansas (\$2.15 billion), Minnesota (\$2.07 billion), Indiana (\$1.59 billion), North Dakota (\$1.51 billion), and Ohio (\$1.19 billion). Nebraska advanced to fourth from sixth position in 1983, with sharp increases for feed grains, hides, and tallow. Texas moved up to fifth from seventh place, mainly because of steep export gains in cotton. Ohio edged ahead of North Carolina as tobacco exports fell \$40 million. 1/

## Basis for State Estimates

Agricultural export estimates by State for major commodity groups were based on the assumption that State contributions to exports are equal to each State's share of production or marketings. For example, if Iowa produced 17 percent of the U.S. soybean crop in 1983, it was assumed that 17 percent of U.S. soybean product exports originated in Iowa (\$7.55 billion times 0.17 equals \$1.28 billion).

Farm marketing ratios from the census of agriculture or other sources were used to calculate State shares when production data by State distorted export patterns or when production statistics by State were not available. State export estimates for wheat were calculated based on export inspections for major types, including hard red winter, spring, and durum. Census Bureau export data groups all wheat types into a single commodity. Wheat export inspections from different port areas yielded information on hard winter, hard spring, soft winter, and durum. Estimates of feeding and ending stocks for feed grains were used along with production by State.

The share-of-production method was used to compute export shares for cotton, cottonseed, soybeans and products, peanuts, and rice. For some commodities, production was not readily available. Exports of beef, animal fats, and

---

1/ See "U.S. Agricultural Export Contributions by State, Fiscal Year 1983", Foreign Agricultural Trade of the United States. U.S. Dept. of Agric., Econ. Res. Serv., May/June 1984.

cattle hides were estimated using commercial cattle slaughter data from 1983. Sunflowerseed production was separated into oil-bearing and non-oil-bearing types. Tobacco production by class (e.g., burley and flue-cured) paralleled the seven-digit export classification codes.

Poultry exports incorporated information on eggs sold, poultry inventory numbers, chicken and broiler sales, turkeys raised, broiler chicks hatched, and feather production estimates. The largest export category of live animals is breed and race horses. Export estimates for horses were changed this year by using port-of-origin data. (Steve Milmo and Thomas Warden, World Analysis Branch).

## U.S.-Canadian Agricultural Trade Balance Narrows

Slow growth in U.S. exports to Canada and steady expansion in U.S. imports from Canada continue to narrow the U.S.-Canadian agricultural trade balance. U.S. exports rose over 6 percent in calendar year 1984, but U.S. imports from Canada shot up 23 percent. The U.S. surplus was only \$116 million compared with \$850 million just 5 years ago.

This narrowing U.S. surplus coincides with a steady erosion in the value of the Canadian dollar. Since 1977, the Canadian dollar has depreciated 30 percent against the U.S. dollar. Over the past decade, U.S. agricultural exports have grown at an annual rate of 4 percent, but Canadian exports have expanded at a 14-percent rate. If present trends continue, the United States could become a net agricultural importer from Canada in 1985.

### U.S. Beef and Poultry Exports Grow

A 17-percent expansion in animal product exports led the increase in U.S. exports in 1984. Beef and veal exports doubled to \$44.5 million, reflecting reduced Canadian cattle slaughter and strikes in the meatpacking industry. U.S. poultry exports also grew sharply because Canadian broiler production, which is regulated by quotas, was not sufficient to meet rapidly growing domestic demand. However, pork exports continued their decline by dropping over 33 percent to only \$15 million.

The U.S. beef and veal export situation in 1985 is unclear. Canada has imposed its Meat Import Act in an attempt to limit imports of manufacturing beef from the European Community (EC). The U.S. quota is 9.8 million tons, but it could be enlarged or altered during the year to allow greater quantities of high-quality U.S. beef.

U.S. animal product exports are forecast to decline slightly in 1985. Beef exports will remain high but will likely decline from 1984's level. Poultry exports are expected to slacken in 1985 because Canadian production quotas were increased for 1985. The United States will remain a net pork importer for the near future due to large Canadian supplies and the strong U.S. dollar. The value of cattle hide exports, which grew 23 percent in 1984, is forecast to drop in 1985 because of lower prices.

### Grain and Oilseed Exports Also Expand

U.S. feed grain exports grew substantially in 1984, as large shipments in the second half of the year offset reduced shipments the first half. A small Canadian barley crop in 1984 reduced supplies available to move to eastern Canada, prompting a greater demand for U.S. corn. Exports should remain high the first half of 1985 but could diminish the second half if Canadian coarse grain production returns to normal.

Oilseed, meal, and oil exports also rose sharply in 1984. Higher Canadian poultry and pork production and tight Canadian oilseed supplies increased demand for U.S. oilseed products. U.S. oilseed product exports should continue strong in 1985, although they will remain below 1984's value. A record-high soybean crop and large

rapeseed crops in 1984 have improved Canadian supplies, but pork and poultry production will remain high.

#### Higher Prices Help Maintain Export Values in 1984

U.S. export volume of fruits and juices was off sharply in 1984. Tight supplies and high prices limited U.S. exports. Citrus export volumes dropped 25 percent, and noncitrus declined 10 percent. Higher prices cushioned the drop in value, however. Another damaging freeze this year in Florida could limit U.S. exports of citrus fruits and juices.

Vegetable export volume was also down in 1984, but higher prices maintained value. Nut exports increased 6 percent in both volume and value but may decline slightly in 1985 due to lower prices. U.S. vegetable exports could also fall off a little in 1985, especially if U.S. prices fall during the spring and summer.

The quantity of U.S. cotton exports fell 16 percent in 1984, but the value remained basically unchanged due to higher prices. Both export volume and value are forecast to increase somewhat in 1985. However, the closing of Canada's second largest textile firm in early 1985 could change this forecast by reducing the demand for U.S. cotton.

#### U.S. Imports to Canada Reach Record Highs

Record-high levels of pork and live hogs led the nearly 25-percent increase in Canadian agricultural exports to the United States in 1984. Pork export volume rose almost 30 percent, while live hog exports nearly tripled to over 1.3 million head. Unless duties are imposed on these products as a result of a countervailing duty case, this trend is expected to continue in 1985.

Beef and veal exports to the United States also increased substantially in 1984, as large Canadian imports of manufacturing beef from the EC freed large amounts for shipment to the United States. Exports of live animals and meat products accounted for over 50 percent of Canada's exports to the United States.

A wide range of other Canadian commodities registered sharp increases in 1984. Exports of dairy products increased over 50 percent to \$57 million. Grain and feed exports, led by wheat products and nongrain feeds, grew 10 percent. Canadian exports of rapeseed meal and millfeeds to the Northwest have expanded rapidly. Some U.S. processors claim these products are being subsidized by the new Canadian freight rate system that reduced rates on these products.

Canadian vegetable exports rose over 10 percent to \$100 million, with some fresh vegetables, such as carrots, onions, and other cool-weather vegetables, showing significant increases. Potato export volume fell, but the value increased over 30 percent. Potato exports to the United States have picked up sharply in 1985 due to larger Canadian production, lower prices, and a decline in exports to other countries.

Canada has also been exporting large quantities of sugar products into the United States, mostly sugar blended into other products. These products rose from \$27 million in 1981 to \$80 million in 1984. However, the United States has restricted the importation of these sugar blends because they were interfering with the operation of the U.S. sugar program.

Many Canadian farm products will maintain a price advantage over similar U.S. products, given the likelihood of the continuing strength of the U.S. dollar. Canadian products will continue to flow south, which could put additional pressures on U.S. producers of similar products. (Carol Goodloe, Western Hemisphere Branch)
